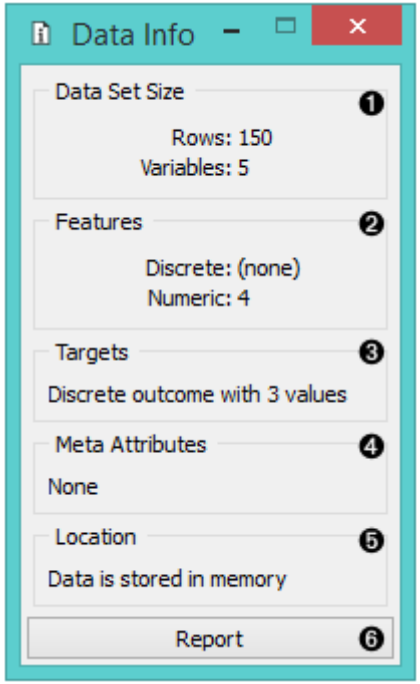
# Data Info

Displays information on a selected dataset.

**Inputs**

- Data: input dataset

A simple widget that presents information on dataset size, features, targets, meta attributes, and location.



1. Information on dataset size
2. Information on discrete and continuous features
3. Information on targets
4. Information on meta attributes
5. Information on where the data is stored
6. Produce a report.

## Example

Below, we compare the basic statistics of two **Data Info** widgets - one with information on the entire dataset and the other with information on the (manually) selected subset from the Scatter Plot widget. We used the *Iris* dataset.
