

EnKlik Anketa

Import data from EnKlikAnketa (1ka.si) public URL.

Outputs

- Data: survey results

The **EnKlik Anketa** widget retrieves survey results obtained from the **EnKlikAnketa** service. You need to create a public link to retrieve the results. Go to the survey you wish to retrieve, then select Data (Podatki) tab and create a public link (javna povezava) at the top right corner.

Then insert the link into the Public link URL field. The link should look something like this: <https://www.1ka.si/podatki/123456/78A9B1CD/>.

Info 3

Zdravo življenje

41 instance(s), 7 feature(s), 1 meta attribute(s)

☒ Commit Automatically 4

? 5

1. A public link to the survey results. To observe the results live, set the reload rate (5s - 5 min).
2. Attribute list. You can change the attribute type and role, just like in the **File** widget.
3. Survey meta information.
4. Tick the box on the left to commit the changes automatically. Alternatively, click *Commit*.
5. Access widget help.

Example

EnKlik Anketa widget is great for observing results from online surveys. We have created a sample survey and imported it into the widget. We have 41 responses and we have asked 8 questions, 7 of which were recognized as features and 1 as a meta attribute.

The widget sets questions from the survey as feature names. This, however, might be slightly impractical for analytical purposes, as we can see in the **Data Table**. We will shorten the names with **Edit Domain** widget.

Edit Domain enables us to change attribute names and even rename attribute values for discrete attributes. Now our attribute names are much easier to work with, as we can see in **Data Table (1)**.

The screenshot shows a workflow in Orange Data Mining. The **EnKlik Anketa** widget is connected to **Data Table** and **Edit Domain**, which is then connected to **Data Table (1)**.

EnKlik Anketa widget details:

- Import Data: Public link URL: <https://www.1ka.si/podatki/142047/79F5A3DC/>
- Reload every: No reload
- Columns (Double-click to edit):
